

Task 3 Submission

Serverless Function with AWS Lambda & API Gateway

Intern Name	Shivang Saini
Candidate ID	IS-2026-9132
Organization	InternSpark Internship Program
Platform	Amazon Web Services (AWS)
Region	ap-south-1 (Asia Pacific — Mumbai)

Objective

Create a simple serverless function using AWS Lambda that returns a JSON response, and expose it publicly via an API Gateway endpoint. This task demonstrates understanding of Function-as-a-Service (FaaS) architecture, event-driven computing, and cloud-native API deployment.

Requirements

- Create a Lambda function using Python runtime
- Test the function using the AWS Lambda console
- Deploy the function and generate a public endpoint via API Gateway

Steps Taken

Step 1 — Create Lambda Function & Write Code

A Lambda function named `intern-serverless-api` was created in `ap-south-1` (Mumbai) using Python 3.12. The `lambda_handler` returns a JSON response with status, task info, engineer name, and a message.

Screenshot 1: Lambda function code — `intern-serverless-api` successfully updated

Steps Taken (continued)

Step 2 — Test Function in Console

A test event named TestTrigger was created and invoked. Execution returned Status: Succeeded with statusCode 200 and the full JSON body. CloudWatch logs confirmed a billed duration of 111ms.

Screenshot 2: Test event 'TestTrigger' — Status: Succeeded, statusCode 200

Steps Taken (continued)

Step 3 — Deploy via API Gateway & Verify Live Endpoint

An HTTP API was configured in API Gateway and linked to the Lambda function. After deployment, the public HTTPS endpoint was accessed in a browser, returning the live JSON output.

Live URL: <https://ejvinszbs3.execute-api.ap-south-1.amazonaws.com/default/intern-serverless-api>

Screenshot 3: Live website accessible via public API Gateway URL — JSON response confirmed

Deliverables Summary

#	Deliverable	Status / Detail
1	Lambda Function Created	✓ intern-serverless-api
2	Python Function Code Written	✓ lambda_handler implemented
3	Function Tested in Console	✓ Status 200, JSON verified
4	API Gateway Configured	✓ HTTP API + default stage
5	Public Endpoint Deployed	✓ Publicly accessible HTTPS URL
6	Screenshots	✓ 3 screenshots included
